Banjo Forte	-																							low - medium	
Carial Flex		-																							low - medium
Carneol			-																						low
Dagonis				-																					medium - high
Gachinko					-																				medium - high
Infito						-																			low - medium
Nando 500 SC							-																		low
Narita								-																	medium
Nautille WP									-																low - medium
Ohayo										-															low
Ortiva											-														very high
Presidium												-													low - medium
Ranman Top													-												medium - high
Reboot														-											low - medium
Revus															-										low - medium
Revus Top																-									low - medium
Rival Duo																	-								low - medium
Shirlan																		-							low
Signum																			-						very high
Terminus																				-					low
Zaftra AZT 250 SC																					-				very high
Zorvec Endavia																						-			medium - high
Zoxis Super																							-		very high

Red Products contain the same active ingredient or there exists a cross resistance, this means they have to be looked at as the same active ingredient in the anti resistance strategy.
Green In this case the change of product also means a change of active ingredient and is in terms of an anti resistance strategy.

Generally the group of active ingredients must be changed after two treatments in a row. ¹⁾ With combined fungicides the indication refers to the active ingredients with the highest risk of resistance. Source modified after FRAC.
